Abstract: The purpose of this study was to determine the effect of a 12-week training program on the physical fitness of 10-year-old children. The study was conducted in a primary school in the city of Istanbul. The children were divided into two groups: a control group and an experimental group. The experimental group participated in a 12-week training program that included aerobic, strength, and flexibility exercises. The physical fitness of the children was measured at the beginning and end of the program using a series of tests. The results of the study showed that the experimental group had significantly higher levels of physical fitness than the control group at the end of the 12-week program. The study suggests that a 12-week training program can improve the physical fitness of 10-year-old children.
